

LIVERPOOL WOMEN'S HOSPITAL NHS FOUNDATION TRUST 2018/19
Accident & Emergency Department Clinical Quality Indicators

JULY 2018

Unplanned re-attendance [HQU09]

Unplanned re-attendance rate

Description of data
Unplanned re-attendance at A&E within 7 days of original attendance (including if referred back by another health professional)

Key messages
 - The re-attendance rate can reflect quality of care on the initial attendance but does not demonstrate the cause of any problems. Good practice is for a reattending patient to be seen by a different and more senior clinician.
 - Rates above 7% are likely to reflect poor quality care but rates below 1% may reflect excessive risk aversion.

Narrative

The patients who have re-attended have been validated. The percentage of returns this month is recorded as 6.43% a marginal decrease from 6.49% last month however still on the decrease.

6.43%	Rate this month
7%	Target
	Data quality

Left without being seen [HQU11]

Left without being seen rate

Description of data

The percentage of people who leave the A&E without being seen.

Key messages

- LWBS reflects the satisfaction of patients with the initial management and experience they receive in A&E.
 - The left without being seen rate should be minimal and best practice would be to have level below 5%.
 - A rate at or above 5% may trigger intervention as this is one of the five A&E quality indicators included as a headline measure under national oversight to assess organisational and system health in the NHS Operating Framework for 2011/12.

Narrative

We aim always to avoid this situation with all our patients. On occasion patients make the decision to leave sometimes this happens without discussion with the nursing team. We have seen an decrease this month to 3.69% from 4.81%. - we aim to keep patients informed when there are delays to avoid them leaving without an assessment. We do try to keep the patient informed of delays. if they decide not to stay and they inform us we would aim to reassess and determine if it is safe to defer an assessment.

Description of Performance

3.69%	Rate this month

Total Time in A and E for Admitted Patients

Site-level performance

Description of data
The median, 95th percentile and single longest total time spent by patients in the A&E department, for admitted patients.

Key messages
 - Timeliness of care should not deteriorate from that achieved in the last few years.
 - The total time in A&E should not be investigated in isolation, and should be monitored in conjunction with the other A&E clinical quality indicators
 - Clinical advice suggests that a 95th percentile wait above 4 hours for admitted patients and with the same threshold for non-admitted patients is not good practice.
 - The single longest wait should be no more than 6 hours.
 - A 95th percentile wait above four hours may trigger intervention as this is one of the five A&E quality indicators included as a headline measure

Narrative

The wait time for admission this month is a median wait of 225 an 8 minute increase in median wait time. The actual longest wait is recorded as 225 which is below the national target time for admitted patients. This wait time can be multifactorial - waiting for bed availability, condition of patient may warrant an extended observation period in ED. Sometimes it is due to the availability of the medics with outside pressures often having to attend theatre sessions and other assessments for patients who have deteriorate

Description of Performance Within the target setting, this month sees a reduction in the total time in GED.

224.65	95th percentile this month

Site performance against national benchmarks and performance thresholds

Total time in the A&E department (non-admitted patients) [HQU10]

Site-level performance

Description of data

The median, 95th percentile and single longest total time spent by patients in the A&E department, for non-admitted patients.

Key messages

- Timeliness of care should not deteriorate from that achieved in the last few years.
- The total time in A&E should not be investigated in isolation, and should be monitored in conjunction with the other A&E clinical quality indicators
- Clinical advice suggests that a 95th percentile wait above 4 hours for admitted patients and with the same threshold for non-admitted patients is not good practice.
- The single longest wait should be no more than 6 hours.
- A 95th percentile wait above four hours may trigger intervention as this is one of the five A&E quality indicators included as a headline measure under national oversight to assess organisational and system health under Technical Guidance for the 2011/12 Operating Framework – Draft 22 December 2010 38 national oversight in the NHS Operating Framework for 2011/12.

Site performance against national benchmarks and performance thresholds

Description of Performance

Within target set, we are striving to keep the time in the department to the minimum.

This month seen a slight decrease to 212 from 225 minutes on the median recording from May. We have had 5 breach episodes with a total of 8 patients - a decrease from 13 patients in June - however that was on 3 occasions. These episodes have three main reasons, Medical staff cover reduction - theatre attendance, bed availability and acuity ..

212	95th percentile this month

Time to initial assessment in A&E [HDQ12]

Site-level performance

Description of data

Time from arrival to start of full initial assessment, which includes a brief history, pain and early warning scores (including vital signs), for all patients arriving by emergency ambulance.

Key messages

- The delay in the A&E department in assessing and then accepting care of the patient should be minimised but that assessment must be meaningful and add value for the patient:
- Patients should be assessed as soon as possible; good practice would be to have all patients assessed within 20 minutes of arrival.
- A 95th percentile time to assessment above 15 minutes may trigger intervention as this is one of the five A&E quality indicators included as a headline measure under national oversight to assess organisational and system health in the NHS Operating Framework for 2011/12.

Site performance against national benchmarks and performance thresholds

Description of Performance

We have achieved the threshold this month with a median recording of 14 minutes an increase this month

13	95th percentile this month
15	Target
	Data quality

Time to Treatment in A&E [HQU13]

Site-level performance

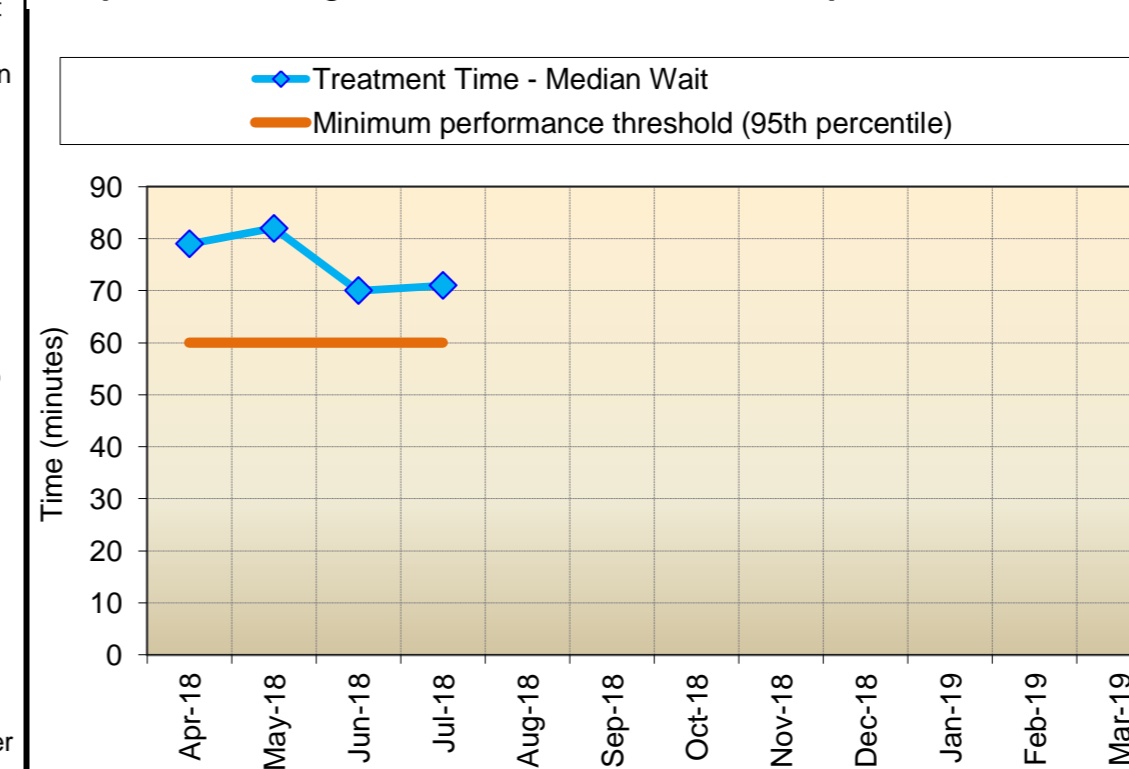

Description of data

Time from arrival to start of definitive treatment from a decision-making clinician (someone who can define the management plan and discharge the patient).

Key messages

- Time to the start of treatment should be minimised but not at the expense of other A&E Clinical Quality Indicators.
- Expert clinical opinion suggests that patients should be seen by a decision-maker within 60 minutes of arrival, but this may be too long for the more serious cases.
- The earlier the correct management plan is made the better for the patient; a wait of over 30 minutes is excessive for certain presentations, e.g., sepsis, stroke, myocardial infarction, respiratory distress.
- A median above 60 minutes from arrival to seeing a decision-making clinician across all patients may trigger intervention as this is one of the five A&E quality indicators included as a headline measure under national oversight to assess organisational and system health in the NHS

Site performance against national benchmarks and performance

Description of Performance

Time to initial assessment by a decision making clinician has had an improvement in the last 2 consecutive months

Narrative: The time to definitive treatment remains at a stable median . The 60 minute target waiting to be seen by a decision making clinician has been the one performance target we regularly struggle to achieve, this month we have achieved a median of 71 minutes staying close to the previous month of 70 minutes . The data would suggest that the impact and experience of the ENP team is now having an effect on the patient experience however the on occasion room capacity can impact - we are also having issues with multiple recording systems and lock out times on computers adding to the time spent on documentation.

Service experience

What have we done to understand and assess the experience of our patients from April 2017 -April 2018

- Social media, twitter and Facebook are also being used to encourage our patients to give feedback about the our Services.
- Formal and informal issues raised through Complaints and PALS have been used to understand and assess the experience of patients attending the Gynaecology Emergency Department patients are invited to board meeting to share their experiences
- Friends and family feedback is collated by patients experience team this service is being reviewed as the number of feedback cards is reducing - suggestions are to add in text response.

- Identified funding for additional nurses to be trained in scanning and working with colleagues in ultrasound to mentor nursing staff in early pregnancy scanning- this will commence in the new year
- NICE guidelines for the management of miscarriage have been assessed to understand compliance levels- Action plan to address non compliance- miscarriage pathway is under a review and service change is planned for 2019
- Emergency Nurse practitioner roles, clinical decision maker time frames should improve over the coming months
- Establish emergency follow up clinics for patient with pregnancy of unknown location, offering consistent approach with continuity and senior clinical presence
- mdt on Monday mornings to review PUL management

What were results of these assessments?

- Waiting times too long
- Communication- telephone access
- Staff attitude/ Customer care
- inability to offer one stop scan
- Excellent care
- Empathy

Has this resulted in improved patient experience?

- Local ownership, department managers have increased involvement in problem solving and have ability to influence service provision at the point of care
- Flexible use of additional rooms/ resources.
- Systems and processes in place to address feedback.

Liverpool Women's NHS Foundation Trust

Accident & Emergency Department Clinical Quality Indicators

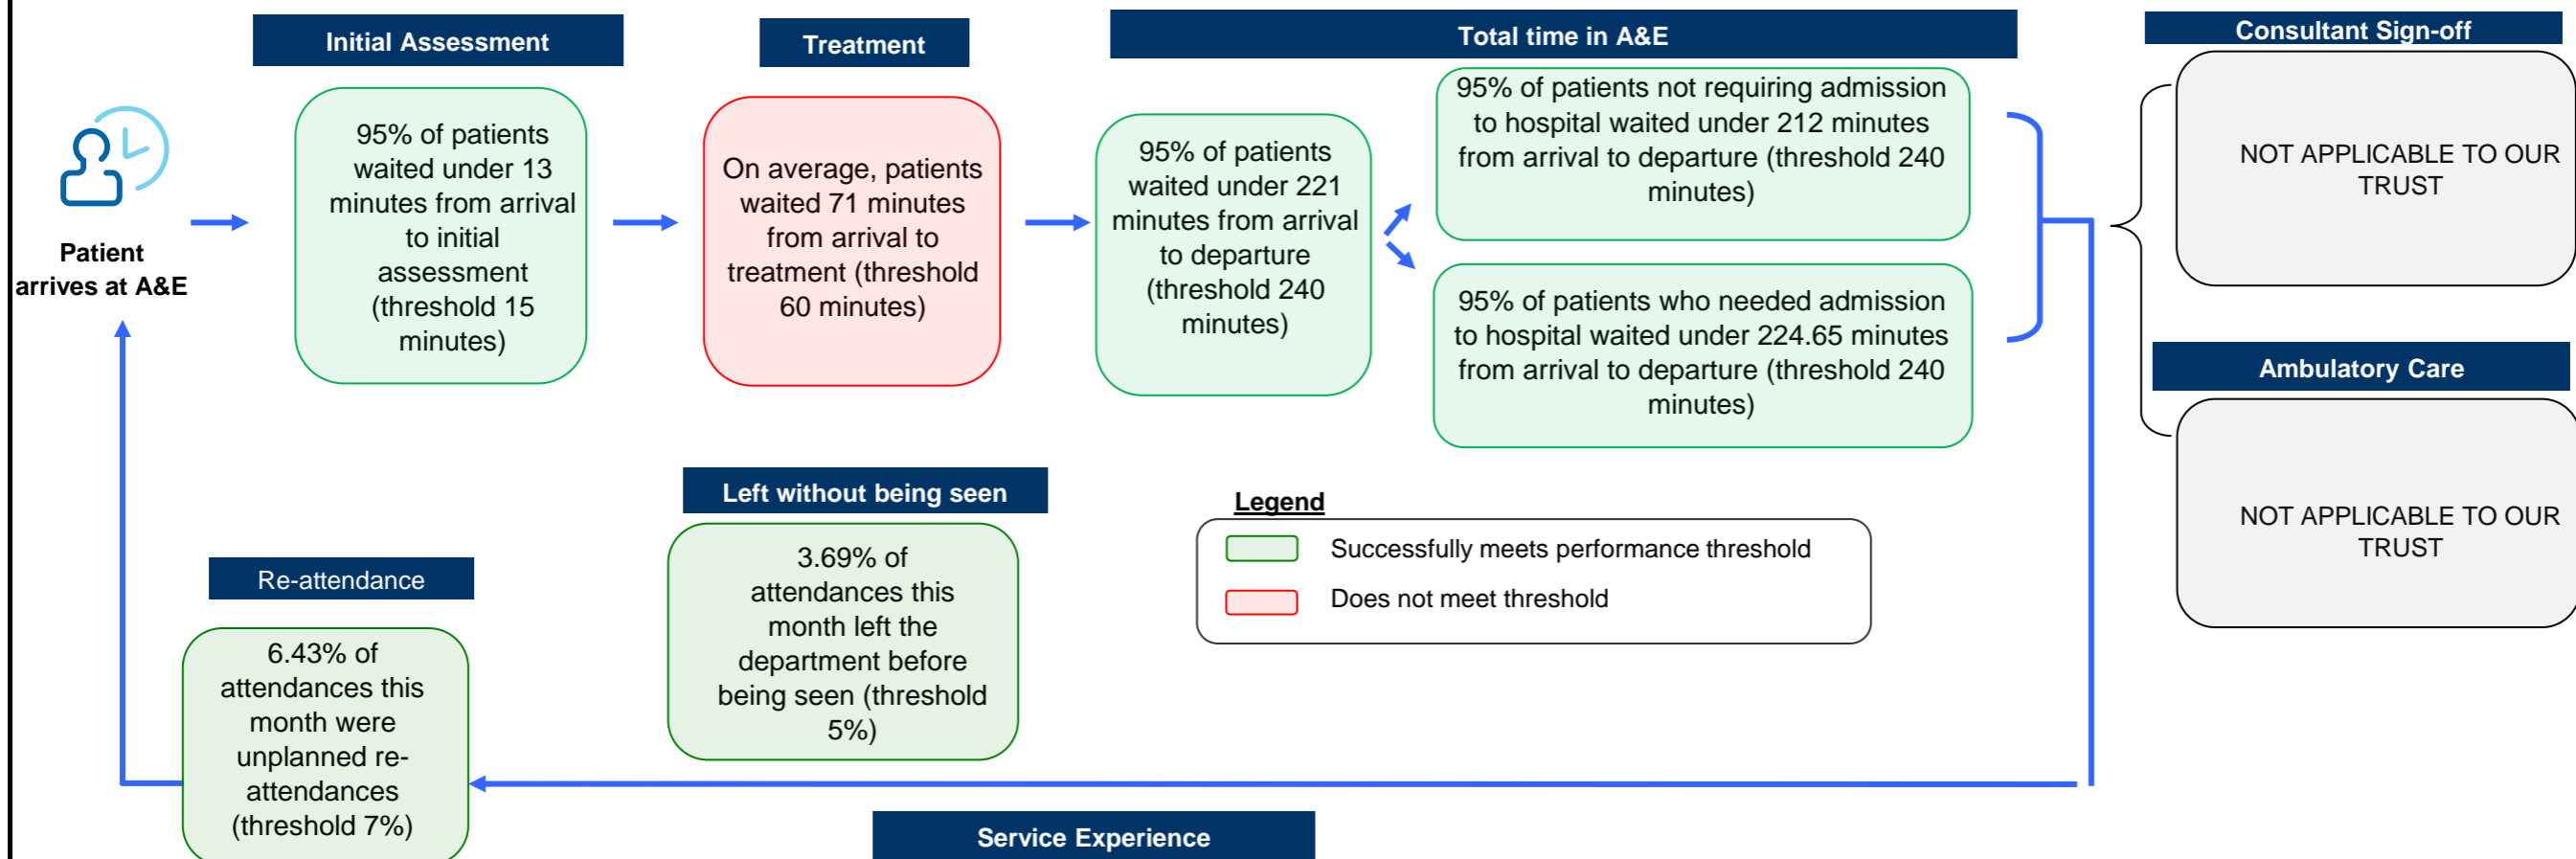

Overview

This dashboard presents a comprehensive and balanced view of the care delivered by our A&E department, and reflects the experience and safety of our patients and the effectiveness of the care they receive. These indicators will support patient expectations of high quality A&E services and allow our department to demonstrate our ambition to deliver consistently excellent services which are continuously improving.

General Information

Summary of performance - July 2018

A greater emphasis on sharing the experiences of our patients has ensured that both the departmental staff and executive board are able to hear our patients experiences of using the gynaecology department emergency service. In sharing their experiences, patients have enabled the whole team to reflect and prioritise actions to improve the patient experience. Trust representatives are also working closely with colleagues in primary care, to combine efforts to provide a more seamless service.

High volumes of telephone calls have been identified as an issue and we commenced a new call handling service to improve the experience of those whom contact us for telephone advice. This activity is now evidenced and delivered by registered nurses, this does

N.B. Information on Service Experience and Ambulatory Care are collected on a quarterly basis; information on Consultant Sign Off is collected on a six-monthly basis
