

Information following your procedure on Ambulatory Care

Hysteroscopy + Pipelle Biopsy Removal of Fibroid/Polyp (Myosure) Retrieval of missed Coil

- You may experience bleeding or watery discharge after the procedure for 1-3 weeks.
- If you have had a fibroid or polyp removed you may experience bleeding for 2-4 weeks. You can expect heavier bleeding similar to a period within the first week.
- You may experience mild discomfort within the first 24-48 hours.
- We recommend no heavy lifting or strenuous activities for the rest of the day.
- We recommend that you use sanitary towels and not tampons whilst you are bleeding as this could cause an infection.
- We recommend sexual intercourse can resume after the bleeding has stopped.
- Please see the GP if you are concerned you may have an infection as they can review if you need to have a course of antibiotics.

Hysteroscopy and Endometrial Ablation (Novasure)

- If you have had an ablation procedure you may experience bleeding for 2-4 weeks. You can expect heavier bleeding similar to a period within the first week post procedure.
- You will experience period like pain and cramping for the first 24-48 hours. We recommend you take regular pain relief.
- We recommend no heavy lifting or strenuous activities for the rest of the day.
- We recommend that you use sanitary towels and not tampons whilst you are bleeding as this could cause an infection.
- We recommend sexual intercourse can resume after the bleeding has stopped.
- Please see the GP if you are concerned you may have an infection as they can review if you need to have a course of antibiotics.

Minor procedures e.g. removal of vulval cyst

- When cleaning the area use warm water. Avoid soaps that may irritate the wound site.
- When drying the area pat dry, do not rub the area as this may cause discomfort.
- If the consultant has used stitches these will take approximately 3-4 weeks to dissolve. If you notice any redness or discharge from the wound site please see the GP as you may need to have a course of antibiotics.
- If the consultant has used silver nitrate to stop the bleeding you may experience a dark coloured discharge for a few days, this is normal.

Please contact 111 for advice or attend the Gynaecology Emergency Department (GED) at Liverpool Women's Hospital if experiencing any the following

- Severe pain
- Passing blood clots (If the clots are larger than clots you may experience when on a period)
- Unable to pass urine

Results usually take between 4 and 6 weeks. If you have not received them please ring the switchboard on 0151 708 9988 and ask for your consultant's secretary – Please do not ring Outpatients as staff in this department are unable to give results out.

If you have an issue with a follow up appointment please call the patient appointment line on 0151 708 9988 extension 4328
